

General Diagnose

- [Windows OS Repair](#)

Windows OS Repair

CHKDSK

Run to check the disk for corruption on the NTFS partition.

```
chkdsk
```

SFC

Run SFC to check for corrupted system components. If some are found run DISM and then rerun SFC.

```
sfc /scannow
```

DISM

Run if SFC found corruption to repair the component store and then rerun SFC.

```
Dism /online /cleanup-image /restorehealth
```
